

## Fossil Finder Top Spots

Dinosaur bones and fossils have been found from burning deserts to frozen Antarctica. But as the map shows, some places are top spots for digging up dinosaurs.

**Lyme Regis, southwest England**  
Fossils of Pterodactyls and Plesiosaurs found at this site.  
A favourite spot for fossil hunters.

Plesiosaur

Velociraptor

New site

**The Karoo Basin, Africa**  
Many Sauropod fossils found here. Some are from 250 million years ago.

Diplodocus

**Flaming Cliffs, Gobi Desert, Mongolia**  
Discovered in the 1920s. Some of the best known dinosaurs, such as Velociraptors, have been found here.

**Como Bluff, Wyoming, United States of America**  
Remains of dinosaurs such as the 27 metre long Diplodocus found here.

**Yunnan Province, China**  
Six dinosaur skeletons were found at this site in 2004.

Diplodocus

**Winton, Australia**  
Over 3 000 footprints made by over 300 different kinds of dinosaurs have been found here. The footprints were made 95 million years ago.

**Valley of the Moon, Argentina**  
This valley is famous for its fossils of the relatives of crocodiles, mammals and dinosaurs. Fossils from the Triassic period have been found here.
